SIMPLE, CHEAP, LOAD ROLLER THAT ANYBODY CAN MAKE

Boiler Shell Filled With Concrete at Cost of \$50.

A most excellent road roller can be made by any one and so cheaply that the cost will not be of any consequence.

Purchase a boiler shell four feet six inches long and three feet nine inches in diameter. Set it up on end, put a shaft in the center and fill the shell with concrete.

Make a frame like the one illustrated and you will have a five ton road roller at a cost of about \$50.

CONCRETE ROLLER.

A ROAD WASTE.

The appropriations made by the different states for improved roads have been wasted to a very large extent. New York has built about 650 miles of improved highways, Pennsylvania perhaps one-third as much. And neither state nor any other so far as we know has made proper provision for their maintenance. Here is where the waste comes in. More millions will be wasted unless some plan of keeping the state roads in repair is put into operation soon. No sense in building costly roads and then letting them go to pieces for the want of attention at the right time.

ASPHALT FOR ROADS.

Will Make Excellent Binding, Says London Engineer.

Cecil Nathan, an engineer of London who gives especial attention to roadmaking, expresses the belief that asphalt is destined to take the place of tar as a binder of macadam roads. He defines the "essential desiderata" of a satisfactory road as follows: "The appearance and even surface, following the contour of the road, which must be sanitary, dustless, noiseless and non-slippery." Mr. Nathan also stipulates that the ideal road must not only have these qualities, but be reasonable in initial cost and above all in maintenance.

"Many of the present generation will remember the phrase, 'Electricity is only in its infancy,' says Mr. Nathan. 'Well, today the road is in its infancy, and I have no doubt that it will grow into as fine and healthy a child as electricity did. Like other infants, the road is just beginning to speak, and the first word that it has been taught is 'tar.' Now, I hope it will very soon grow up and learn words of two syllables, such as 'asphalt,' and then be able to expound to road engineers the real meaning of this much misunderstood word. 'This is the tar age, and as an indifferent palliative tar is serving its purpose today as a temporary expedient, but something much more permanent than the primitive methods of tar spraying or even tar macadam is required for the future, and I maintain that permanency will be obtained only from the adoption of waterproof road crust binders of either Lake Trinidad asphalt or Cuban asphalt, but preferably Cuban asphalt, owing to its having a higher melting point and its ability to withstand the rotting effects of water.'"

Oil Concrete Road.

The first stretch of oil concrete highway to be laid in Pennsylvania has just recently been completed on the Harrisburg-Linglestown road. It is about a quarter of a mile in length and is between Progress and Paxtonia. The oil concrete road is an experiment made by the state highway department, which in 1907 rebuilt the highway from the eastern terminus of the city to Paxtonia.

The section just laid replaces a quarter of a mile of road constructed of concrete. The new section of road is made of concrete into which are mixed asphaltic oils. The top surface is not arched so much as the rest of the road, the crown being constructed on a basis of three-eighths of an inch to a foot. The crown is the same as that used in laying a brick pavement.

Missouri's Oldest Road.
Twelve miles of the old "king's highway" near Sikeston, Mo., the oldest road in Missouri, is being rebuilt with rock macadam. Curtis Hill, the state highway engineer, has organized a special benefit assessment road district to carry on the work. Later the road will be extended to New Madrid.

FREE ROAD DRAGS.

To encourage road work Roy Williams, highway engineer of Macon county, Mo., gives a road drag free to every farmer who makes application for one. If the farmer does not use his drag it is taken from him and given to some one more industrious. The roads of the county have been much improved by the arrangement.

BUYING BREEDING POULTRY.

Good Blood in Poultry Yard Is Not a Mere Whim, But a Money-Maker.

Breeding stock should be accustomed to their quarters before the breeding season opens. Those of our readers who have made up their minds to dispose of their old cocks should get them out of the way and replace them with new ones without much delay. The old ones will never taste much better than right now. A tough old bird can be made very palatable if put into a stew and cooked slowly long enough. If the old ones are not out of the way before the new ones arrive, the old ones will look upon the new ones as intruders, and fights will result that can serve no good end. If the new arrivals and no opponents they will accommodate themselves to conditions very quickly, and the flock will be ready to get results by the time eggs are wanted for hatching.

There can be no doubt about it, no doubt that those who are reading progressive farm papers will want to improve their flocks. If they do not this year, they will next or the year after. This thing of having good blood is no mere idle whim. It is a money-making proposition. The sooner good blood is got into the flock, the sooner will more pride be taken in the business and more profits taken out of it.

It requires so much money to stock up on both males and females for the larger classes of live stock that most farmers feel they can not afford it; but this is not the case with poultry. A good male and a small number of females can be got at a small outlay. If there are no other males on the place the new male can be used with the whole flock. This will give a few standard bred birds and many others that are not standard bred. If one desires to have some that are pure standard bred and to know which are pure blooded and which are not, it will be necessary to have a pen for the pure bloods. Usually pens for poultry on the farm should not be tolerated, but an exception might properly be made in a case of this kind.

Where possible, the poultry raiser should begin at the top every time—that is, start with standard bred fowls in every case by using standard bred breeders of both sexes. If this can not be afforded—usually it can—then get standard bred males, and make a year.

The change that will be brought in the flock in twelve months will be enough to make anyone proud. The second year the offspring will look so much like their standard bred ancestors that it will begin to be hard to tell the birds of mixed breeding from those that are standard bred. When a flock reaches this degree of excellence, it begins to be a very practical fowl for the farmer whose chief aim is to get a reasonable number of eggs and nice carcasses for selling and to have every lot of eggs and birds marketed grade evenly and consequently make that pleasant impression on the eye that makes good sales.

It so happens that after a poultry man starts with one breed of fowls he seldom has the right to get new blood by crossing with some other breed. Such violent crosses are unfortunate, since a common result is that the offspring do not develop the good qualities of their immediate ancestors so much as they do their bad qualities. The offspring looks too much like mongrels. Always get new blood by using birds of the same breed.

The experience of practical breeders have so repeatedly shown that these principles are correct that there is no use in listening to the free advice given by some one who is unable to tell whether a fowl is standard bred or not. Wide experience and many observations are necessary to formulate rules for breeding, and it is safer to follow the advice of those who have attained great success than it is to follow the advice of some one who has really never accomplished much.

With the crops practically hoisted and only the remnants to be gathered, there is now nothing to do but to fix up things generally and commence operations for next year's crop. One road way to begin is to sow rye, wherever possible, for grazing in the spring and for soil improvement. We want to plan to make larger yields per acre next year than we made this year, or last year either. The surest way to do this is to do better farming. Rye will hold much fertility that would be leached out of the soil by the winter rains and lost to us if there were no living plants to take it up. And when plowed under next spring, rye will give to the land, in addition to the stored fertility, humus which most of our lands stand so much in need of. It is late, of course, to sow rye, but this is one of the things about which it can be truthfully said: "Better late than never."

A dry floor well covered with litter keeps the hens contented when blizzards are raging outside, and it fills the egg basket when eggs were worth anywhere from 30 to 50 cents per dozen.

Change the feed lots often. It improves the land greatly and improves the hog trade.—A. M. Worden.

It is claimed that fine pork can be made on alfalfa for one cent a pound.—A. M. Worden.

Don't Suffer!

"I had been troubled, a little, for nearly 7 years," writes Mrs. L. Finch, in a letter from Peavy, Ala., "but I was not taken down, until March, when I went to bed and had to have a doctor. He did all he could for me, but I got no better. I hurt all over, and I could not rest. At last, I tried Cardui, and soon I began to improve. Now I am in very good health, and able to do all my housework."

TAKE The CARDUI Woman's Tonic

You may wonder why Cardui is so successful, after other remedies have failed. The answer is that Cardui is successful, because it is composed of scientific ingredients, that act curatively on the womanly system. It is a medicine for women, and for women only. It builds, strengthens, and restores weak and ailing women, to health and happiness.

If you suffer like Mrs. Finch did, take Cardui. It will surely do for you, what it did for her. At all druggists.
